Divers

- **The Discovery Fast Track Challenge from the Discovery Partnerships with Academia (DPAC) group at GlaxoSmithKline** is now open for submissions.

This is an outstanding opportunity to win a partnership with GSK scientists. Together, we'll work to discover new pharmacologically active molecules via High Throughput Screening (HTS) and/or Encoded Library Technology (ELT). For successful applicants, this will help drive their research forward—and could lead to a partnership with GSK for the development of a new medicine.

Up to ten projects from Europe will be selected in the 2014 challenge. The challenge opens February 24 and one-page non-confidential proposals will be accepted online until April 23. We strongly encourage you and your institution to take advantage of this opportunity. Please share news of the Discovery Fast Track Challenge with your principal investigators.

To learn more, or to submit your proposal, visit www.gsk.com/discoveryfasttrack

For more information about DPAC, please visit www.dpac.gsk.com.
